- Dr Robert Malone, inventor of the mRNA vaccine technology, speaks to the DNA contamination

Kat A
@SaiKate108

The greatest threat to Big Pharma indemnity is the DNA contamination in the vaccines.

The FDA claim there is nothing to see here. That is correct only because Pfizer avoided doing any genotoxicity and integration studies.

Dr Robert Malone is shocked by the FDA claim that contamination is not an issue when the dangers are well known to all experts in the field.

Highlighted by the fact that Moderna promoted its RNA patent on the basis it would overcome the dangers of DNA in vaccines.

RefugeOfSinners (ROS)
@RefugeOfSinner5

This is an intent to deceive.

Genomics scientist, Kevin McKernan, reviews with us the Pfizer quality control test on one lot of their Covid-19 vaccine. This Pfizer report was released as part of an FOI. He shows us how Pfizer gamed the RNA result to make the DNA contamination look smaller than it is, and therefore pass the required test.

"Pfizer already had the assay, they didn't like the answer, so they went searching for another tool to get through the regulations."

What's in the shots? A 'shocking' discovery

By REBEKAH BARNETT

Early in 2023 genomics scientist Kevin McKernan made an accidental discovery.

WHILE running an experiment in his Boston lab, McKernan used some vials of mRNA Pfizer and Moderna covid vaccines as controls. He was 'shocked' to find that they were contaminated with tiny fragments of plasmid DNA.

McKernan, who previously managed R&D on the Human Genome Project, ran the experiment again, confirming that the vials contained up to 18-70 times more DNA contamination than the legal limits allowed by the European Medicines Agency (EMA) and the Food and Drug Administration (FDA).

In particular McKernan was concerned to find the presence of an SV40 promoter in the Pfizer vaccine vials. This is a sequence that is "used to drive DNA into the nucleus, especially in gene therapies", McKernan explains. This is something that

regulatory agencies around the world have specifically said is not possible with the mRNA vaccines.

McKernan raised the alarm, posting his findings to Twitter

(now X) and Substack with a callout to other scientists to see if

they could replicate his findings. Other scientists soon confirmed McKernan's findings, though the amount of DNA contamination was variable, suggesting inconsistency of vial contents depending on

batch lots. One of these scientists was cancer genomics expert Dr Phillip Buckhaults, who is a proponent of the mRNA platform and has received the Pfizer covid vaccine himself. *Continued page 2*

@RetsefL

DNA contamination of mRNA vaccines exceeds allowed limit by factor of 200-350!

Under what regulatory system this doesn't lead to immediate withdrawal from market?

Regulatory agencies ignore their own rules & continue recommending these vaccines!
Why?
